ABOUT

Computer Science Engineering student specializing in full-stack MERN development and applied machine learning, with hands-on experience building and deploying production-ready web applications, RESTful APIs, and LLM-integrated solutions. Passionate about developing scalable software and solving real-world problems through modern web technologies and AI.

EDUCATION

B.E. in Computer Science & Engineering

2022 – 2026

AMC Engineering College, Bengaluru

CGPA: 8.39/10

TECHNICAL SKILLS

Languages	JavaScript (ES6), TypeScript, Python, C, Dart
Frontend	React.js, HTML5, CSS3, Flutter
Backend	Node.js, Express.js, FastAPI, REST APIs
Database	MongoDB
AI/ML & Tools	Google Gemini API, DistilBERT, Git, GitHub
Core Concepts	Data Structures & Algorithms, Object-Oriented Programming

INTERNSHIP EXPERIENCE

Full Stack Web Development Intern

Feb 2026 – May 2026 *SuprMentr Technologies*

- Developed 10+ responsive frontend interfaces/components using React.js, integrating them with backend services.
- Built and consumed RESTful APIs using Node.js, Express.js, and MongoDB for full-stack application development.
- Collaborated with a 3-member Agile team using Git for version control, contributing to sprint-based feature development and timely project delivery.
- Debugged and optimized frontend and backend modules, improving application reliability and maintainability.

PROJECTS

Smart Helpdesk System

Live *React.js, Node.js, Express.js, MongoDB, Google Gemini API, Vercel*

- Built a full-stack AI-powered helpdesk application using the MERN stack, integrating the Google Gemini API to auto-generate ticket responses and reduce manual drafting effort.
- Implemented secure role-based authentication (JWT) and a ticket management system supporting 3 user roles (admin/agent/user).
- Designed, developed, and deployed RESTful APIs for authentication, AI-powered ticket management, notifications, FAQs, and user administration.

Cyberbullying Detection System

Live *Python, DistilBERT, Flask, Render*

- Fine-tuned DistilBERT on a labeled text dataset for multi-class cyberbullying and severity classification.
- Built and deployed a Flask REST API on Render for real-time inference on user-submitted text.
- Co-authored a related peer-reviewed paper, “A Chained Deep Learning Model for Fine-Grained Cyberbullying Detection with Bystander Dynamics,” published in IJIRAE (Nov 2025), proposing a chained BERT–LSTM architecture that achieved an F1-score of 0.89. DOI: 10.26562/ijirae.2025.v1210.13

Neobrutalism E-Commerce Website

Live *HTML, CSS, JavaScript*

- Developed a modern, fully responsive e-commerce frontend inspired by Neobrutalism design principles, featuring reusable UI components.
- Focused on usability, accessibility, and clean, maintainable frontend architecture.
